Wonder, Value and God

Robin Attfield

Series: Transcending Boundaries in Philosophy and Theology

This book relates the value present in the natural world and in human creativity to an underlying purpose which it traces in creation. It opens by invoking the wonder aroused by nature’s value and celebrated by poets, and moves to a cosmic purpose as the best explanation of this value. Human creativity is later related to inspiration, and to traditional theistic teaching about the purpose of human life. In integrating the themes of value, creativity and purpose, the book contributes a new synthesis to the literature of philosophy, environmental studies and theology.

Praise for Wonder, Value and God

‘An important, sensitive, scholarly, and readable analysis of the notions of value and creativity in nature and human life, showing the consilience of ecological ethics with the idea of the value-creating purpose of God.’ - Keith Ward, Christ Church, University of Oxford and Heythrop College, University of London

‘We marvel at natural and human history, then marvel that humans can so marvel. Earth in this universe is a staggering wonder. Humans (alone) can celebrate this momentous creating of value, and probe its meanings, even when bleak with disvalues, at length wondering about God—as Attfield so superbly does.’ - Holmes Rolston III, Colorado State University

‘Wonder and value are terms much bandied about, often with all too little precision. Robin Attfield approaches them with characteristic accuracy, facing honestly the issue of creaturely disvalue. This opens up the possibility of a really creative engagement with both the natural world and the arts. Warmly recommended!’ - Christopher Southgate, University of Exeter

‘Wonder, Value and God offers an original and comprehensive philosophy and theology of wonder and value. As well as providing an accessible introduction to the relevant themes, it also incorporates Attfield’s own ideas which will be of interest to those working at the intersection of philosophy and theology.’ - Fiona Ellis, Heythrop College, University of London
